

LE DUC LINH

Hanoi, Vietnam

0967325594 | leduclinh564th@gmail.com

SUMMARY

.NET Developer with 5+ years of experience building scalable enterprise systems using C#, ASP.NET, Angular, MongoDB, and SQL Server. Strong background in system architecture, performance optimization, automation workflows, and team leadership. Experienced in designing high-concurrency systems, third-party integrations, and real-time processing solutions.

TECH STACK

- Backend: C#, ASP.NET, REST API
- Frontend: AngularJS, Angular
- Database: MongoDB, SQL Server, Redis
- Messaging & Search: RabbitMQ, Elasticsearch
- Tools: Docker, Git, SVN
- Architecture: Clean Architecture, Microservices, Async Processing
- Others: AI-assisted development, system optimization

Key Achievements

- Optimized MongoDB queries and data processing logic, reducing average response time from ~3s to ~500ms and improving performance under high concurrency.
- Designed an automated QR code ticket email system, delivering tickets within 5–7 seconds per email (post-payment or bulk sending), reducing manual errors by ~90% and minimizing spam issues.

EXPERIENCE

Sub Leader / FullStack Developer — JDI (2023 — Present)

- Led a team of 5 developers and coordinated project planning, estimation, and delivery.
- Designed and developed enterprise systems including event management, HRM, booking, and Zalo Mini Apps.
- Built asynchronous processing systems using RabbitMQ for mass Email/SMS/QR workflows.
- Integrated third-party services including payment gateways, accounting systems, SMS, and ZNS.
- Technologies: .NET, Angular, MongoDB, Redis, RabbitMQ, Elasticsearch.

FullStack Developer — Newwave Solution (2021 — 2022)

- Participated in outsourcing projects for Japanese clients.
- Developed and upgraded enterprise desktop/web applications using .NET technologies.
- Worked on WebForms, WPF, WinForms, REST APIs, and SQL Server systems.
- Technologies: .NET, SQL Server, WPF, WebForms, Angular, ReactJS.

SELECTED PROJECTS

Event Management Platform

Tech: .NET, MongoDB, AngularJS, RabbitMQ

- Developed event registration, ticketing, QR check-in, and payment systems.
- Designed scalable asynchronous workflows for high-concurrency processing.

Sports Booking Platform

Tech: .NET, Angular 18, MongoDB, RabbitMQ

- Built real-time booking and field-status management system.
- Designed flexible search APIs and prevented double-booking issues.

Zalo Mini App Ecosystem

Tech: Angular 18

- Migrated and redesigned mobile app workflows to Zalo Mini App platform.
- Established project architecture and development standards from scratch.

EDUCATION

CodeGym Hanoi Programming Training Center (6 months)

STRENGTHS

- System Design & Architecture
- Performance Optimization
- Team Leadership
- High-Concurrency Processing
- Third-party Integration
- AI-assisted Development
